Applicant's submission filed on 2-4-04 has been entered.
4. Claims 147-210 are pending.

***Election/Restrictions***

5. Claims 147-210 are generic to a plurality of disclosed patentably distinct species comprising antibodies or antibody fragments that inhibit binding of chemokines a) MIP-1 $\alpha$ , b) MIP-1 $\beta$  or c) RANTES to the human CCR5 receptor. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of chemokine, i.e., either a) MIP-1 $\alpha$ , b) MIP-1 $\beta$  or c) RANTES, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1647

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

This requirement is deemed necessary for examination purposes due to the introduction of the new limitations directed toward the specificity of the antibodies and antibody fragments to the different chemokines and arguments of record that the various chemokines are subject to different specific receptor binding parameters and hence the antibodies and antigen binding fragments thereof provide for different regional antibody binding/inhibiting specificity.
